Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

1. Upon careful consideration, prosecution on the merits of this application is reopened on claims 22, 24, and 41 considered unpatentable for the reasons indicated below and the finality of the office action mailed February 26, 2003 is withdrawn.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 22, 24, and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over WO 93/19887 (hereafter '887) in view of Rischke et al. (US 5,512,154).

'887 discloses the invention substantially as claimed except for step of passing an electrical current through an electrically conductive surface for applying a coating of liquid electrophoretic photoresist. Rischke teaches steps of applying electrophoretic resist layer by passing an electric current through an electrically conductive surface in a photoresist bath. It would have been obvious to one having ordinary skill in the art at the time the invention was made to employ the steps of applying electrophoretic resist layer as taught by Rischke on the process of '887 in order to obtain a uniform coating.

Response to Arguments

4. Applicant's arguments with respect to claims have been considered but are moot in view of the new ground(s) of rejection.
